

## **What are high-resolution photographs?**

High-resolution photographs are images that are sharp, finely detailed and suitable for printing. Generally speaking the more mega pixels in an image, the higher the quality.

We need your photos to be in high resolution if we are to print them!

Most cameras have a setting where you can choose the amount of mega pixels per picture. As a guide, setting up your camera on 6 to 8 megapixel should produce good quality photos that we should be able to use for a book.

## **How to share high-resolution photographs?**

High res photos are not ideal to email around as their file size is usually very big.

A much easier way to share your high res photos is to upload them to a shared site that other people can access such as:

- [www.4shared.com](http://www.4shared.com)
- <https://www.google.com/accounts/ServiceLogin?service=lh2> (picasa)

Remember to send us the details of where and how to access your photos.
